Liquidity coverage ratio disclosure

The Liquidity Coverage Ratio ('LCR') aims to ensure that a bank has sufficient High Quality Liquid Assets ('HQLA') to meet its liquidity needs in a 30 calendar day severe liquidity stress scenario. HBAU follows guidelines set by APRA and is compliant with the minimum coverage ratio requirement of 100%. HBAU reported a weighted average LCR of 144.1% in the quarter ended 30 June 2022.

HBAU maintain a well-diversified and high quality liquid asset portfolio of \$14.5bn to support regulatory and internal requirements. HBAU's mix of HQLA liquid assets consists of cash, deposits with Central Bank, Australian Semi Government and Commonwealth Government Securities.

Funding sources to support business growth are primarily from customer deposits.

LCR Net Cash Outflows ('NCOs') represent the net cash flows that could potentially occur from on and off balance sheet activities within a 30-day severe liquidity stress scenario. The cash flows are calculated by applying APRA prescribed run-off factors to maturing debt, deposits and off balance sheet exposures offset by inflows from assets based on prescribed run-off factors.

Higher run-off factors are applied to sophisticated investors and depositors including long term and short term debt holders, financial institution and corporate depositors. Lower run-off factors are applied to deposits less likely to be withdrawn in a period of severe stress. These include deposits from people and from small and medium enterprises. Deposits from corporate and financial institutions, which are considered to be operational in nature, also attract a lower run-off.

Cash outflows arising from business activities that create contingent funding and collateral requirements, such as repo funding and derivatives and the extension of credit and liquidity facilities to customers, are also captured within the LCR calculation along with an allowance for debt buyback requests.

HBAU manages its LCR position on a daily basis, ensuring a buffer is maintained over the minimum regulatory requirement and the Board's risk appetite.

During the period of March 2022 to June 2022, the average LCR ratio has increased by 2.4% from 141.7% to 144.1%. This was mainly attributable to decreased net cash outflows of \$0.5bn driven by decreased unsecured wholesale funding of \$0.4bn and decreased other contractual funding obligations of \$0.1bn partly offset by decreased liquid assets of \$0.5bn driven by decreased high-quality liquid assets of \$0.4bn.
